

# Final Project exchange feedback

Group 42 exchanged feedback with Ulrik Bakken Singsaas [s341917] and their group.

## Feedback received:

### General:

- If possible, would give logo more cohesive feel if entire thing was highlighted and the color of the logo was also inversed
- Language dropdown feels a bit "out of place" maybe better to have a link instead, since it's just a two options to toggle between

### Sollution page

- Is it intentional to write AI with lowercase i in the header?

### Sources Page:

- Quote mark burde kanskje være over teksten, istedenfor å knocke ut hele paragraphet og gjøre det tynnt?
- Wierd spacing i footeren

### Cool stuff:

- The audio implementation (though will blind people find it? Probably good either way tho.)

## What we did with the feedback:

- 1) Fixed.
- 2) At this time, the language dropdown was a nearly unstyled `<select>` element, with javascript to change pages when a user selects a language option. The fallback for when javascript is disabled, is a plain link. We considered reverting to just a link, but concluded that the dropdown was useful, since it allows for extending with more languages in the future. In such an event, the plain link fallback would be replaced with a link to a new webpage that asks the user to select a language. We styled the dropdown and made it look better.
- 3) Fixed.
- 4) We discussed this, but couldn't come to agree with the criticism. `<blockquote>` automatically indents its contents, and we simply styled it to have a subtle quote icon to the left, inspired by websites such as <https://wisdomquotes.com/famous-quotes/>
- 5) Fixed.
- 6) This is a concern we had from the start. We would love to somehow make the audio voice overs easily accessible to users with screen readers and the like, though we couldn't figure out how even after extensive research on the internet.
